

## PKG-341-MBC08-PS-CBL

## System Diagram and Specifications

| Included Components: |  |
| :---: | :---: |
| 34Y112S-LW8-MS |  |
| MBC082561 |  |
| PSA80V4A-1 |  |
| Stepper Motor |  |
| CBL-18AWG-04C-010-MS |  | Stepper Driver

- NEMA 34 Frame Size
- Holding Torque - 637 oz-in
- $1.8^{\circ}$ Step Angle
- High Step Accuracy and Resolution
- Low Vibration and Noise
- CE Certified RoHS Compliant

The 34Y112S-LW8-MS High Torque Stepper Motor offers a great value without sacrificing quality. This motor was designed to offer the highest possible torque while minimizing vibration and audible noise. It is wired in series with a Molex 4 pin Mini-Fit Jr. receptacle.

A 10 ft .4 conductor, 18 AWG cable with mating 4 pin Mini-Fit Jr plug is included in the PKG-341-MBC08-PS-CBL stepper/motor package.

| Model \# | NEMA <br> Size | Holding <br> Torque <br> $(\mathrm{oz}-\mathrm{in})$ | Bipolar <br> Current <br> $(\mathrm{A})$ | Bipolar <br> Resistance <br> $(\mathrm{ohms})$ | Bipolar <br> Voltage <br> $(\mathrm{v})$ | Bipolar <br> Inductance <br> $(\mathrm{mH})$ | Rotor <br> Inertia <br> $\left(\mathrm{oz}-\mathrm{in}-\mathrm{sec}^{2}\right)$ | Shaft <br> Diameter <br> (in) | Weight <br> $(\mathrm{lbs})$ | Length <br> (in) |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 34Y112S-LW8-MS | 34 | 637 | 4.3 | 0.78 | 3.35 | 6.8 | .0198 | 0.5 | 5.1 | 3.15 |

| Step Angle Accuracy: | $\pm 5 \%$ (Full Step, No Load) | Insulation Resistance: | 100M Ohm Min, 500VDC |
| :--- | :--- | :--- | :--- |
| Resistance Accuracy: | $\pm 10 \%$ | Dielectric Strength: | 500 VDC for 1 minute |
| Inductance Accuracy: | $\pm 20 \%$ | Shaft Radial Play: | $0.02 "$ Max (1.0 lbs) |
| Temperature Rise: | $80^{\circ} \mathrm{C}$ Max (2 Phases On) | End Play: | $0.08 "$ Max (1.0 lbs) |
| Ambient Temperature: | $-20^{\circ}$ to $+50^{\circ} \mathrm{C}$ | Max Radial Force: | $49.5 \mathrm{lbs}(0.79 "$ from flange) |
| Insulation Type: | Class B | Max Axial Force: | 13.5 lbs-Force |

LW8-MS

| Pin \# | Lead Wire Connection | Lead Wire Color |
| :---: | :---: | :---: |
|  |  |  |
| 1 | Phase 1 (A) | Black |
| 2 | Phase 3 (Al) | Orange |
| 3 | Phase 2 (B) | Red |

|  | Soldered Together | White/Black \& White/Orange |
|  | Soldered Together | White/Red \& White/Yellow |

## MBC082561-Microstep Driver

- Size 4.685'L x 2.000’W x 4.000’'H
- Output Current 7.8 Amps Peak
- 400 to 51,200 steps/rev
- Over-Voltage, Under Voltage and Short Circuit Protection
- Selectable Stand Still Current Reduction
- No Minimum Inductance
- Optical Isolation
- Motor ON/OFF Input

The MBC082561 Microstep Driver has an output current capability of 2.8 Amps minimum to 7.8 Amps maximum (Peak Rating). The MBC082561 driver operates on a DC voltage of $22-90$ volts. The inputs are optically isolated with a minimum sourcing of 15.0 mA per input @ $5+\mathrm{VDC}$. The clock input is set to receive either positive or negative edge clocks with a maximum frequency of 400 kHz . The MBC082561 driver offers direction control and motor current ON/OFF capabilities. The Reduce Current Enabled automatically reduces motor current to $60 \%$ of set value after the last step is made (1sec delay). The driver has built-in features to indicate power on (Green LED) and fault conditions (Red LED)

With the MBC082561, various step resolutions can be implemented by the onboard dip switch. These division range from 400 steps per revolution to 51,200 steps per revolution. The bipolar drive configuration handles 4,6 and 8 lead motors. Protection devices have been added to this driver for Short-Circuit, Motor Mis-Wire, Over-Voltage and Under Voltage conditions.

| Power Requirements: | $22-90 \mathrm{VDC}$ |
| :--- | :--- |
| Output Current Range: | $2.8-7.8 \mathrm{Amps}$ (Peak) |
| Microstepping Resolution: | $400-51,200 \mathrm{Steps} /$ Rev |
| Input Signal Voltage: | $3.5-5 \mathrm{VDC}$ |
| Input Clock Frequency: | $0-400 \mathrm{kHz}$ |
| Storage Temperature: | $0-50^{\circ} \mathrm{C}$ |
| Absolute Maximum Driver Temperature: | $65^{\circ} \mathrm{C}$ |

## TYPICAL APPLICATION HOOK-UP SINKING OUTPUTS:

## Connecting the Step Motor

Phase $1(\mathrm{~A})$ and Phase $3(\mathrm{Al})$ of the Step Motor is connected between pins 3 and 4 on the motor connector (TB3). Phase 2 $(B)$ and Phase $4(B \backslash)$ of the Step Motor is connected between pins 5 and 6 on the motor connector (TB3). Refer to TYPICAL APPLICATION HOOK-UP.

NOTE: The physical direction of the motor with respect to the direction input will depend on the connection of the motor windings. To reverse the direction of the motor with respect to the direction input, switch the wires on Phase 1 (A) and Phase 3 (Al).

## Short-Circuit, Mis-Wire, and Over Current Conditions

If there is a condition that causes an over current in the driver phase transistors, the alarm indicator LED will turn red and power will be shut off to the motor. To reset the drive turn power off, check wiring, and turn power back on.

## Over-Voltage and Under-Voltage Conditions

When the power supply voltage exceeds +90 VDC , protection will be activited and the alarm indicator LED will turn red. When the power supply voltage is lower than +22VDC, the driver will not work properly.

## Optically Isolated Input Pin Descriptions

The inputs on the MBC082561 are optically isolated with the anode (+) and cathode (-) both brought out to the user. With no current going through the opto-diode, the input is considered high. To enable the input a minimum of 7.0 mA needs to be sourced or sinked through the opto-diode. This is done simply by placing a voltage of +5 VDC across the two inputs of the opto-diode. If sourcing current into the inputs, then all three cathodes $(-)$ should be tied together and grounded. If sinking current, then all three anodes $(+)$ should be tied together to the +voltage. See TYPICAL APPLICATION HOOK-UP diagram.

## TB1 and TB2: 4 and 2 Pin Terminal Description

| Pin \# | Description |
| :---: | :--- |
| 1 | Step Clock Input Anode (+): A positive going edge on this isolated input advances the motor one <br> increment. The size of the increment is dependent of the Microstep Select Inputs of Switch 1. |
| 2 | Step Clock Input Cathode (-) |
| 3 | Direction Anode (+): This isolated input is used to change the direction of the motor. Physical <br> direction also depends on the connection of the motor windings. |
| 4 | Direction Cathode (-) |
| 1 | ON/OFF Anode (+): This isolated input is used to enable and disable the output section of the <br> driver. When HIGH (open) the outputs are enabled. |
| 2 | ON/OFF Cathode (-) |

## TB3: 6 Pin Terminal Description

| Pin \# |  |
| :---: | :--- |
| 1 | GND: Power Return |
| 2 | VIN: $(+22$ to +90VDC $)$ |
| 3 | Phase A: Phase 1 of the Step Motor |
| 4 | Phase Al: Phase 3 of the Step Motor |
| 5 | Phase B: Phase 2 of the Step Motor |
| 6 | Phase BI: Phase 4 of the Step Motor |

## Setting the Output Current:

The output current for the motor used when microstepping is determined differently from that of a full/half step unipolar driver. In the MBC082561, a sine/ cosine output function is used in rotating the motor. The output current for a given motor is determined by the motors current rating and the wiring configuration of the motor. There are 3 DIP switches used to set the output current of the MBC082561. This sets the peak output current of the sine/cosine waves.

The specified motor current of 4.3 for the $34 \mathrm{Y} 112 \mathrm{~S}-\mathrm{LW} 8-\mathrm{MS}$ (which is the bipolar value) is multiplied by a factor of 1.4 to determine the peak value of 6.0 Amps . The 3 switches should be set to ON, ON, OFF to select the current value of 5.7A to avoid burning up the motor.

| Peak Current | RMS Current | SW 1 | SW 2 | SW 3 |
| :---: | :---: | :---: | :---: | :---: |
| 2.8 A | 2.0 A | ON | ON | ON |
| 3.5 A | 2.5 A | OFF | ON | ON |
| 4.2 A | 3.0 A | ON | OFF | ON |
| 4.9 A | 3.5 A | OFF | OFF | ON |
| 5.7 A | 4.0 A | ON | ON | OFF |
| 6.4 A | 4.5 A | OFF | ON | OFF |
| 7.0 A | 5.0 A | ON | OFF | OFF |
| 7.8 A | 5.5 A | OFF | OFF | OFF |

## Reducing the Output Current:

Switch 4 is used for enabling or disabling the reduced current at standstill. When this switch is off, the driver will be in reduced current setting and the standstill current will be $60 \%$ of the set motor current. When this switch is on, the driver will not be in reduced mode and the standstill current will be $100 \%$ of the set motor current.

## WARNINGS:

Do not set the current setting above the step motor's rated current. When using a higher current setting into a motor, the motor will overheat and burnup. Should this occur, the driver will also be damaged.

Do not connect or disconnect motor wires while power is applied! Doing so will cause an extremely high back-EMF voltage surge which could possibly destroy the driver.

## Microstepping Selection (DIP Settings)

Switches 2, 3, and 4 of the DIP switch select the microstep resolution of the driver. The table below shows thes standard resolution values along with the associated positions for the select switches. The standard waveforms are sinusoidal. The steps/rev are based on a 200 step/rev motor.

| Resolution | Steps/Rev | Position 1 | Position 2 | Position $\mathbf{3}$ | Position 4 | Auto Reduce Current |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1 | 200 | OFF | ON | ON | ON | Disabled |
| 2 | 400 | OFF | ON | ON | OFF | Disabled |
| 5 | 1000 | OFF | ON | OFF | ON | Disabled |
| 8 | 1600 | OFF | ON | OFF | OFF | Disabled |
| 10 | 2000 | OFF | OFF | ON | ON | Disabled |
| 16 | 3200 | OFF | OFF | ON | OFF | Disabled |
| 32 | 6400 | OFF | OFF | OFF | ON | Disabled |
| 64 | 12800 | OFF | OFF | OFF | OFF | Disabled |
| 1 | 200 | ON | ON | ON | ON | Enabled |
| 2 | 400 | ON | ON | ON | OFF | Enabled |
| 5 | 1000 | ON | ON | OFF | ON | Enabled |
| 8 | 1600 | ON | ON | OFF | OFF | Enabled |
| 10 | 2000 | ON | OFF | ON | ON | Enabled |
| 16 | 3200 | ON | OFF | ON | OFF | Enabled |
| 32 | 6400 | ON | OFF | OFF | ON | Enabled |
| 64 | 12800 | ON | OFF | OFF | OFF | Enabled |

- Low Cost
- High Reliability
- Short Circuit
- Overload Protection

The PSA80V4A-1 power supply has a single 80 V output, a voltage input of 115 or 220 VAC , and power capabilities of up to 320 watts. With an unregulated output and a size of 8.30 " $\times 4.25$ " $\times 2.81$ " and dual mounting position "L Bracket," the PSA80V4A-1 can be mounted just about anywhere. The PKG-341-MBC08-PS-CBL includes two wires for powering the MBC12101.

| DC Voltage Output: | 80 V |
| :--- | :--- |
| Output Rated Current: | 4 A |
| Input Voltage Range: | $115 / 220 \mathrm{VAC}, 60 \mathrm{~Hz}$ |
| Rated Output Power: | 320 W |
