DESCRIPTION

The ENC-A5DI is a differential encoder designed for quick and simple assembly to any minimum shaft length 0.445" and shaft size ranging from 0.079" to 0.394" in diameter. The ENC-A5DI module is designed to detect the rotary position with a code wheel. When attached to the end of a shaft, the encoder provides digital feedback information. This differential encoder consists of a LED source lens and a monolithic detector IC enclosed in a small polymer package. These modules implement phased array detector technology providing superior performance and tolerances over traditional aperture mask type encoders. The ENC-A5DI series provides digital quadrature differential outputs on all resolutions and are capable of sinking or sourcing 8 mA each. These encoders are powered from a single +5VDC power supply and are RoHS compliant and REACH certified.

Note: Dimensions are in inches

Cover Options:	Description
E - Option	E-Option provides a cylindrical extension cover for larger shafts. The required shaft length is .445" to .750". Note: E-option + R-Option the required shaft length is .570" to .875".
H - Option	Shafts 2mm to 1/4", a .295" diameter hole is supplied. Shafts 5/16" to 10mm, a .438" diameter hole is supplied. Required shaft length > 0.445" Note: H-Option + R-Option the required shaft length is > .570"
Default Option	The required length is .445" to .570" Note: Default Option + R-Option the required shaft length is .570" to .695"

3-OPTION:

3-Option: Makes all five hole diameters .125"

T-OPTION:

T-Option: A pre-applied transfer adhesive (with peel-off backing) is available for "stick-on" mounting.

A-OPTION:

A-Option: Adds a .497" diameter alignment shoulder designed to slip into a .500" diameter recess in the mounting surface centered around the shaft.

R-OPTION:

R-Option: Adapter is an 1/8" thick fiberglass adapter which is pre-mounted to the base of the encoder. It allows the encoder to rotate +/- 15 degrees.

*This option adds 1/8" to the required shaft length.

G-OPTION:

G-Option: Includes molded ears which enables it to be mounted to a 1.812" diameter bolt circle. Mounting holes are designed to fit 4-40 screws. Will work with shaft lengths of .445" to .570" and does not add to the required shaft length.

Note: All dimensions are in inches

(Note: Base Mounting Screws are NOT included. #2-56 or #4-40 screws can be used to mount the base to your mounting surface.)

Model #	Description
CPR(N):	The Number of Cycles Per Revolution
One Shaft Rotation:	360 mechanical degrees, N cycles
One Electrical Degree (°e):	1/360th of one cycle
One Cycle (C):	360 electrical degrees (°e). Each cycle can be decoded into 1 or 4 codes, referred to as X1 or X4 resolution multiplication
Symmetry:	A measure of the relationship between (X) and (Y) in electrical degrees, nominally 180 °e
Quadrature (Z):	The phase lag or lead between channels A and B in electrical degrees, nominally 90 °e
Index (CH I):	The Index Output goes high once per revolution, coincident with the low states of channels A and B, nominally 1/4 of one cycle (90°e)
