

ENC-M15HN - High Resolution Modular Encoder Without Index

FEATURES

- 1250 to 8192 Counts Per Revolution (CPR)
- Tracks 0 to 200,000 Counts Per Second
- Powered From a Single +5VDC Power Supply
- Allows for ± 0.010 " Axial Shaft Play
- NEMA 23 to 42 Compatible
- Shock and Vibration Resistant
- High Resistance to Dirt and Debris
- RoHS Compliant

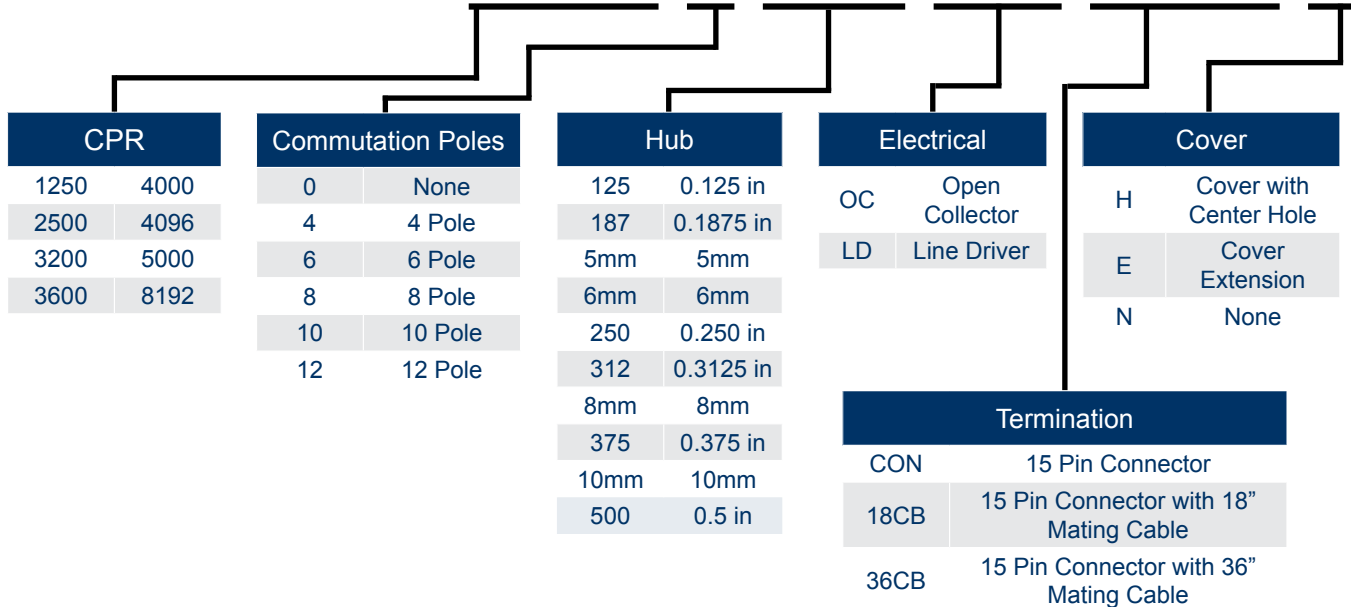

DESCRIPTION

The M15HN High Resolution, Magnetic Incremental Encoder without Index offers reliable performance at an economical price. This modular unit comes in a large range of resolutions with multiple pole commutations and reference pulse options. This magnetic encoder can handle shaft sizes that range from .125" to .500". The patented EMI circuitry provides protection from high-frequency electrical noise and background magnetic fields. This low-profile design is perfect for stepper motor positioning and anti-stall feedback, DC brush-type motor positioning, brushless DC, and servo motor control using the commutation options. The M15HN comes enclosed in a rugged IP40 package for protection from debris.

CUSTOM ORDER LAYOUT

Cover Options	Description
H	H-option provides a cylindrical cover with a center hole
E	E-option provides a cylindrical cover
N	The standard cylindrical cover will be supplied with this option

Dimensions are in inches (mm)

Pin#	Wire Color	Open-Collector	Line Driver	Index Pulse, Open-Collector	Index Pulse, Line Driver Communication
1	Yellow	A+	A+	A+	A+
2	Yellow/White	--	A-	--	A-
3	Blue	B+	B+	B+	B+
4	Blue/White	--	B-	--	B-

15	Grey	--	--	--	--

Terminology	Description
CPR (N):	The Number of Cycles Per Revolution
One Shaft Rotation:	360 mechanical degrees, N cycles
One Electrical Degree (°e):	1/360th of one cycle
One Cycle (C):	360 electrical degrees (°e). Each cycle can be decoded into 1 or 4 codes, referred to as X1 or X4 resolution multiplication
Symmetry:	A measure of the relationship between (X) and (Y) in electrical degrees, nominally 180°e
Quadrature (Z):	The phase lag or lead between channels A and B in electrical degrees, nominally 90°e
Index (CH I):	The index output goes high once per revolution, coincident with the low states of channels A and B, nominally 1/4 of one cycle (90°e)

Recommended Operating Conditions	Min	Max	Units
Open-Collector Temperature	-40	125	°C
Line Driver Temperature	-40	85	°C
Supply Voltage	4.5	5.5	VDC
Count Frequency	-	2.4	mHz
Current	-	70	mA

Parameter	Max	Units
Vibration (20 to 2kHz)	3	g
Max Speed	10000	RPM
