

# NSK Grease Unit

The NSK Grease Unit is a compact and easy-to-use lubrication unit for use on the NSK Linear Guides™, ball screws and Monocarriers™. We provide a wide variety of grease to choose from to meet your needs.

# NSK Grease Unit

For lubrication of the guiding and feeding parts of the NSK Linear Guides™, ball screws and Monocarriers™

Appropriate lubrication of guiding and feeding parts is essential to maximizing the efficiency and usefulness of machinery from engineering tools to semiconductor equipment. NSK provides various types of grease units that you can choose from for use in high-speed, high-load, oscillating, and high-temperature environments or clean rooms.

## Features of NSK Grease Unit

NSK provides compact, hand-operated grease pumps and a wide variety of nozzles that enable you to easily apply grease to guiding and feeding parts. You can easily attach a bellows tube container to the pump. The name of the grease being used is on the bottom of the bellows tube container. Containers are color-coded to make it easier to identify the type of grease after the container is attached to the pump.

## NSK Grease AS2

Reference no. : NSK GRS AS2  
Quantity: 80 g Tube color: Brown

## NSK Grease LR3

Reference No. : NSK GRS LR3  
Quantity: 80 g Tube color: Green

### Feature

It is an environmentally friendly and widely used grease for high load application. It is mineral oil based grease containing lithium thickener and several additives. It is superb in load resistance as well as stability in oxidization. It not only maintains good lubrication over a long period of time, but also demonstrates superb capability in retaining water. Even containing a large amount of water, it does not lose grease when it is softened.

### Application

It is a standard grease for general NSK linear guides, ball screws and monocarriers. It is prevalently used in many applications because of its high base oil viscosity, high load resistance, and stability in oxidization.

### Range of use temperature

-10 to +110°C

### Properties

Thickener	Lithium soap base
Base oil	Mineral oil
Consistency	275
Dropping point	181°C
Volume of evaporation	0.24% (99°C, 22 hr)
Copper plate corrosion test	Satisfactory (Method B, 100°C, 24 hr)
Oil separation	2.8% (100°C, 24 hr)
Base oil kinematic viscosity	130 mm <sup>2</sup> /s (40°C)

### Maintains good lubrication over a long period of time

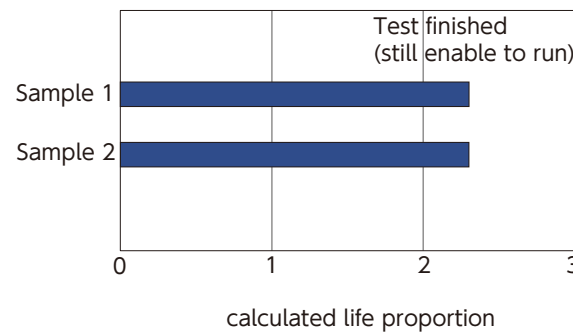

#### ▶ Sample: Ball Screw

Shaft diameter	36 mm
Lead	10 mm
Dynamic load rating	27 200 N

#### ▶ Test conditions

Load	7 300 N
Rotational speed	1 000 min <sup>-1</sup>
Stroke	60 mm
Intervals of replenishments	Periodically

#### ▶ Result of durability test (example)

#### ▶ Comparison of ball screw track surfaces

##### Before running

##### After running

### Feature

It contains a special synthetic oil for high temperature and stability, and a carefully selected anti-oxidation agent. This grease dramatically increases lubrication life under high temperature conditions. It is used for high speed, medium load. Lubrication life exceeded 2 000 hours in the endurance test at 150°C. Its rust prevention capacity in severe conditions such as water and moist environments is further strengthened.

### Application

It is a standard grease for ball screws PSS type (shaft dia. 15 mm or over), FSS type and VFA type. It is ideal for operation with medium load, at high speed such as positioning in high tact material handling equipment.

### Range of use temperature

-30 to +130°C

### Properties

Thickener	Lithium soap base
Base oil	Synthetic oil
Consistency	227
Dropping point	208°C
Volume of evaporation	0.30% (99°C, 22 hr)
Copper plate corrosion test	Satisfactory (Method B, 100°C, 24 hr)
Oil separation	1.9% (100°C, 24 hr)
Base oil kinematic viscosity	30 mm <sup>2</sup> /s (40°C)

### Suitable for high-speed operation

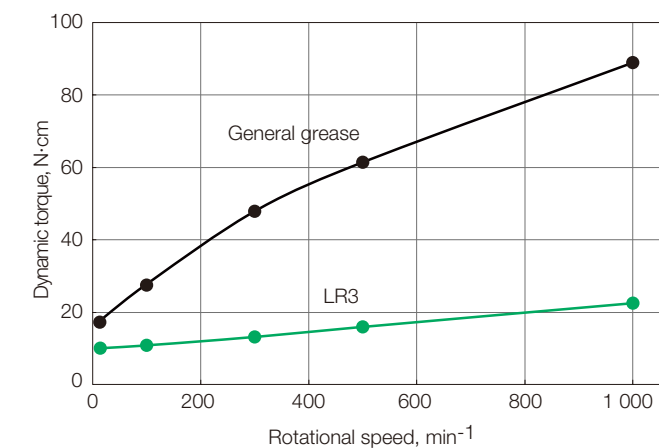

#### ▶ Sample: Ball screw

Shaft diameter	32 mm
Lead	5 mm

#### ▶ Test conditions

Stroke	300 mm
Rotational speed	10 to 1 000 min <sup>-1</sup>

#### ▶ Torque characteristics of ball screw

## NSK Grease LG2

Reference no. : NSK GRS LG2  
Quantity: 80 g Tube color: Blue

### Feature

This grease was developed by NSK to be exclusively used for linear guides, ball screws and Monocarriers in clean room. Compared to the fluorine grease which are commonly used in clean room, LG2 has several advantages such as; higher in lubrication function, longer lubrication life, more stable torque (resistant to wear) and higher rust prevention. In dust generation, LG2 is more than equal to fluorine grease in keeping dust volume low. Since the base oil is not a special oil but a mineral oil, LG2 can be handled in the same manner as general greases.

### Application

LG2 is a lubrication grease for rolling element products such as linear guides, ball screws and monocarriers for semiconductor and liquid crystal display (LCD) processing equipment which require a highly clean environment.

It is a standard grease for NSK standard ball screw USS type.

\* Wash the linear guides and ball screws to remove oil prior to applying Clean Grease LG2, so the grease functions are fully utilized.

\* Clean grease is exclusively used for clean environments under normal pressure.

### Range of use temperature

-20 to +70°C

### Properties

Thickener	Lithium soap base
Base oil	Mineral oil + synthetic hydrocarbon oil
Consistency	207
Dropping point	200°C
Volume of evaporation	1.40% (99°C, 22 hr)
Copper plate corrosion test	Satisfactory (Method B, 100°C, 24 hr)
Oil separation	0.8% (100°C, 24 hr)
Base oil kinematic viscosity	30 mm <sup>2</sup> /s (40°C)

### Low-dust emission, low friction, low torque

#### Sample: Linear Guide

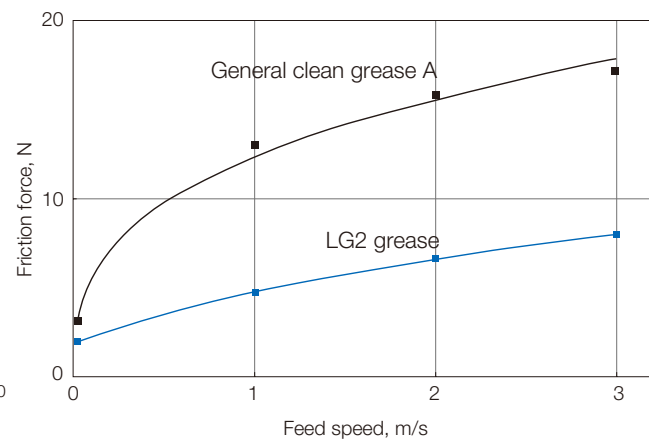

#### Test condition

Stroke	1 500 mm
Feed speed	0.1 to 3 m/s

#### Dust emission from linear guide

#### Measurement result of linear guide friction force

## NSK Grease LGU

Reference no. : NSK GRS LGU  
Quantity: 80 g Tube color: Yellow

### Feature

This is a proprietary urea grease of NSK featuring low dust emission exclusively for ball screws and linear guides which are used in clean rooms.

In comparison with fluorine base grease, which has been used commonly in clean rooms, LGU has better lubricating property, longer duration of lubricant, better torque variation, much better anti-rust property, and equivalent or better dust emission. In addition, this grease can be handled in the same way as the other common grease because high-grade synthetic oil is used as the base oil.

LGU grease contains much less metallic elements compared to LG2 grease. It can be used in high temperature environment.

### Application

This is exclusive lubrication grease for ball screws and linear guides that are installed in equipment that requires cleanliness, as same as LG2 grease, and it can be used in high temperature range.

\* Wash the linear guide and ball screws to remove oil prior to applying Clean Grease LGU, so the grease functions are fully utilized.

\* Clean grease is exclusively used for clean environments under normal pressure.

### Range of use temperature

-30 to +120°C

### Properties

Thickener	Diurea
Base oil	Synthetic hydrocarbon oil
Consistency	209
Dropping point	260°C
Volume of evaporation	0.09% (99°C, 22 hr)
Copper plate corrosion test	Satisfactory (Method B, 100°C, 24 hr)
Oil separation	0.6% (100°C, 24 hr)
Base oil kinematic viscosity	100 mm <sup>2</sup> /s (40°C)

### Superb low torque, low friction as well as LG2

#### Sample: Ball screw

#### Test condition

Shaft diameter	20 mm
Lead	10 mm

Stroke	700 mm

# NSK Grease

Low-temperature  
Light-load

Oscillation

## NSK Grease PS2

Reference no. : NSK GRS PS2  
Quantity: 80 g Tube color: Orange

## NSK Grease NF2

Reference no. : NSK GRS NF2  
Quantity: 80 g Tube color: Gray

### Feature

The major base oil component is synthetic oil with mineral oil. It is an excellent lubrication especially for low temperature operation. It is for high speed and light load.

### Application

It is a standard grease for NSK miniature linear guides and ball screws. It is especially superb for low temperature operation, but also functions well in normal temperatures, making it ideal for small equipment with light load.

### Range of use temperature

-50 to +110°C

### Properties

Thickener	Lithium soap base
Base oil	Synthetic oil + mineral oil
Consistency	275
Dropping point	190°C
Volume of evaporation	0.60% (99°C, 22 hr)
Copper plate corrosion test	Satisfactory (Method B, 100°C, 24 hr)
Oil separation	3.6% (100°C, 24 hr)
Base oil kinematic viscosity	15 mm <sup>2</sup> /s (40°C)

### Good operability in low-temperature conditions

#### ▶ Sample: Ball screw

Shaft diameter	16 mm
Lead	5 mm

#### ▶ Test condition

Rotational speed	100 min <sup>-1</sup>
Stroke	120 mm
Temperature	-32 to +24°C

#### ▶ Torque characteristics of ball screw

### Feature

It uses high-grade synthetic oil as the base oil and urea base organic compound as the thickener. It has remarkable anti-fretting corrosion property. It can be used in wide temperature range, from low to high, and has superior lubrication life.

### Application

This grease is suitable for ball screws and linear guides of which application include oscillating operations.

### Range of use temperature

-40 to +100°C

### Properties

Thickener	Diurea
Base oil	Synthetic hydrocarbon oil
Consistency	288
Dropping point	269°C
Volume of evaporation	7.9% (177°C, 22 hr)
Copper plate corrosion test	Satisfactory (Method B, 100°C, 24 hr)
Oil separation	0.6% (100°C, 24 hr)
Base oil kinematic viscosity	27 mm <sup>2</sup> /s (40°C)

### Suitable for oscillating operation

#### ▶ Sample: Linear Guide

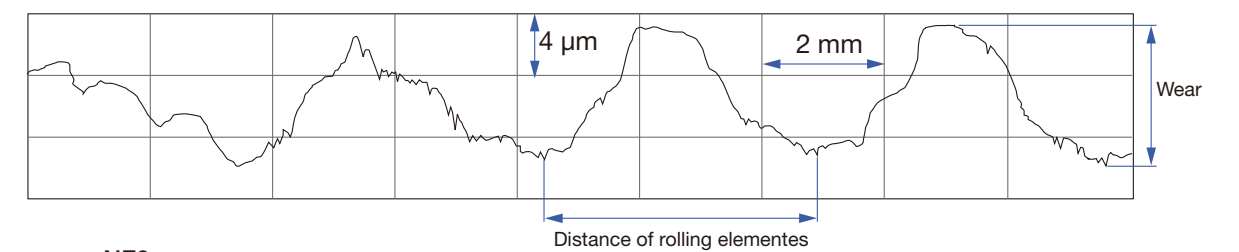

Model No.	LH25

# NSK Grease

## NSK Grease NS7

Reference no. : NSK GRS NS7  
Quantity: 80 g Tube color: Yellow green

Low-temperature

### Feature

It has remarkable torque characteristics (low torque), and can be used wide temperature range.

### Range of use temperature

-40 to +130°C

### Properties

Thickener	Lithium soap
Base oil	Ester oil
Consistency	250
Dropping point	192°C
Volume of evaporation	0.3% (99°C, 22 hr)
Copper plate corrosion test	Satisfactory (100°C, 24 hr)
Oil separation	1.2% (100°C, 24 hr)
Base oil kinematic viscosity	26 mm <sup>2</sup> /s (40°C)

\* For details of NSK Grease NS7, please contact NSK.

## NSK Grease NSL

Reference no. : NSK GRS NSL  
Quantity: 80 g Tube color: Purple

Oscillation

High-speed

### Feature

It has anti-fretting property and superb torque characteristics (low torque) for high-speed operation.

### Range of use temperature

-40 to +130°C

### Properties

Thickener	Lithium soap
Base oil	Synthetic hydrocarbon oil + ester oil
Consistency	280
Dropping point	200°C
Volume of evaporation	0.31% (99°C, 22 hr)
Copper plate corrosion test	Satisfactory (100°C, 24 hr)
Oil separation	1.3% (100°C, 24hr)
Base oil kinematic viscosity	169 mm <sup>2</sup> /s (40°C)

\* For details of NSK Grease NSL, please contact NSK.

# NSK Hand Grease Pump Unit

## Feature

- ▶ **Easy operation**  
Can be operated by one hand, yet there is no worry to making a mistake.
- ▶ **Inserting by high pressure**  
Insert at 15 MPa.
- ▶ **No leaking**  
Does not leak when held upside down.
- ▶ **Easy to change grease**  
Simply attach grease in bellows tubes.
- ▶ **Prevents entry of foreign matter**  
Foreign matter such as dust cannot enter since grease can be changed while in bellows tubes.
- ▶ **Remaining grease**  
Can be confirmed through slit on pump.
- ▶ **Several nozzles**  
Six types of nozzles and two extension pipes to choose from.

## NSK Hand Grease Pump (Reference number: NSK HGP) (Contains one NSK straight nozzle)

### Specifications

Discharge pressure	15 MPa
Spout volume	0.35cc /shot
Mass of main body (without nozzle)	240 g
Provided nozzle	90 g
Body diameter	φ38.1
Accessory	Several nozzles for a unique application can be attached

## Grease nozzle

### Specifications

Type	Reference no.	Applications	Dimensions
NSK straight nozzle	NSK HGP NZ1	Can be used with grease fitting A, B, and C under JIS B1575 standard.	
NSK chuck nozzle	NSK HGP NZ2	Same as above. However, there is no need to press the hand pump because the grease fitting and the nozzle come to contact due to the chucking mechanism at the tip.	
NSK fitting nozzle	NSK HGP NZ3	Dedicated for the - φ3 drive-in grease fitting.	
NSK point nozzle	NSK HGP NZ4	Used for linear guides and ball screws which do not have grease fitting. Supplies grease directly to the ball grooves, or through the opening of ball slide or ball slide to inside.	
NSK flexible nozzle	NSK HGP NZ5	The tip of the flexible nozzle is chuck nozzle. Used to supply grease to the area where hand cannot reach.	
NSK flexible extension pipe	NSK HGP NZ6	Flexible extension pipe connects the grease pump and the nozzle.	
NSK straight extension pipe	NSK HGP NZ7	Straight extension pipe connects the grease pump and the nozzle.	
NSK MCH exclusive fitting nozzle	NSK HGP NZ8	For MCH Series grease replenishment

\*<sup>1</sup> If using a chuck nozzle, avoid interference with table and rail.

\* For PU, LU, PE, and LE Series, apply grease directly to ball groove, etc. using point nozzle.

\* A long threaded grease fitting is required for NSK linear guides because of dust-proof parts.

\* Normally, grease fitting is not provided to NSK ball screw except Compact FA Series. Ball nut has a tap hole to install a grease fitting. The user should install a grease fitting if necessary.

\* For M3×0.5 tap hole, small fitting (screw-in type) is available. Please contact NSK.

\* VFA type cannot install grease fitting. Apply grease directly to inside the nut through oil hole using point nozzle.

\* MA, RMA, MS, RMS, and RNCT types have no tap hole, apply grease directly to the screw shaft and ball grooves using point nozzle.

## ► Applicable grease nozzles for Monocarriers

MCH	MCH06, 09, 10	φ 3	Drive-in type					○

\* Use of NZ3 is recommended.

# Before use of NSK Linear Guides, Ball Screws and Monocarriers

Wipe off rust preventive oil before use if it is supplied to the products.  
 For the products not applied grease, try the system a few times (operate the ball slide of linear guide, ball nut of ball screw or monocarrier slider for whole stroke length 5 to 10 times) after supplying grease, and wipe off excess grease.

# Intervals of checks and replenishments

Although the grease is of high quality, it gradually deteriorates and its lubrication function diminishes. Also, the grease in the ball slide, ball nut and monocarrier slider is gradually removed by stroke movement. In some environments, the grease becomes dirty, and foreign objects may enter. Grease should be replenished depending on frequency of use. The following is a guide of grease replenishment intervals.

Intervals of checks	Items to check	Intervals of replenishments
3 - 6 months	Dirt, foreign matters such as cutting chips	Usually once per year. Every 3 000 km for material handling system that travels more than 3 000 km per year. Replenish if checking results warrant it necessary.

# How to replenish the grease and volume of grease replenished

Supply required amount through grease fitting by a grease pump. Wipe off old grease and accumulated dust before supplying new grease. If grease fitting is not used, or there is no holes for grease replenishment, apply grease directly to the rail or to the ball groove of the screw shaft, and move a ball slide, ball nut or monocarrier slider few strokes so the grease permeates into the ball slide, monocarrier slider and inside the nut.

Once grease is replenished, another supply is not required for a long time. But under some operational conditions, it is necessary to periodically replenish grease. When replenishing using a grease pump, fill the inside of ball slide, ball nut and monocarrier slider with grease. Supply grease until it comes out from the ball slide, ball nut or monocarrier slider area. Move ball slide, ball nut and monocarrier slider by hand while filling them with grease, so the grease permeates all areas. Do not operate the machine immediately after replenishing. Always try the system a few times to spread the grease throughout the system and to remove excess grease. Trial operations are necessary because the resistance to sliding force and screw torque greatly increases immediately after replenishment (full-pack state) and may cause problems. Wipe off excess grease that accumulates at end of rail and screw shaft after trial runs so the grease does not move to other areas.

## How to replenish

- 1 Wipe off old greases on the rail and screw shaft by clean cloth.
- 2 Supply grease until it comes out from the ball slide or ball nut area. Move the ball slide or ball nut by hand while filling them with grease.
- 3 Full-pack state.

# Internal space

Refer to the tables below for the grease quantity of full-pack state.

## Inside space of the ball slide of linear guide

# Precautions

- Do not mix greases of different brands because the grease structure may be destroyed.
- Grease viscosity varies by temperature. Viscosity is particular high in winter due to low temperatures. Pay attention to increases in linear guide and monocarrier sliding resistance, and ball screw and monocarrier torque in such conditions.
- When the ambient temperature is low, or in Winter, if it is difficult to pump out the grease from the container, wait until the grease is softened.
- In locations where coolant is dispersed or scattered, emulsification of lubricants and rinsing with water may significantly deteriorate the integrity of the lubricant and the efficacy of the grease. Protect the grease unit from coolant by shielding it with a cover, etc.

# Other

## MSDS (Material Safety Data Sheet)

If you wish to obtain a copy of an MSDS, please contact NSK.

### Explanation of term

Term	Explanation	Test condition
Thickener	A tiny-fibrillate or granular aggregate that maintains base oil by capillary action. Metallic soap thickeners include a versatile lithium-type, while non-soap thickener include a urea-type, which is high-temperature resistant.	—
Base oil	A synthetic fluid, such as mineral oil, silicone oil, or diesters is used as the base oil of a grease. Since the lubrication a grease provides depends mainly on that of the base oil, the viscosity of the base oil must be as carefully selected as the lubricant.	—
Consistency	The depth a cone of a standard weight reaches when dropped onto grease. Consistency indicates the hardness of grease and helps estimate the fluidity of grease when used. When viscosity is high, the grease is soft, and when viscosity is low, the grease is hard.	JIS K 2220 – 7.
Drop point	The temperature at which heated grease in a small, standardized container turns to a liquid state. In general, this indicates the highest temperature at which excessive separation of oil or drippings have not yet started.	JIS K 2220 – 8.
Evaporation rate	The amount of evaporated grease in a mass percentage after maintaining the grease at a certain temperature and subjecting it to heated air for 22 hours. The lower the value, the better, since grease tends to solidify and provide poor lubrication if the amount of evaporation is high.	JIS K 2220 – 10.
Copper plate corrosion	The result of inspecting whether a polished copper plate changes color to green or black after maintaining the plate in room temperature or 100°C for 24 hours. Use of industry-standardized copper plates is advised.	JIS K 2220 – 9.
Oil releasing	The amount of oil separated from grease in a metallic net after maintaining it at temperature of 100°C for 24 hours. If the rate at which the oil is release is low, it may result in poor lubrication, and if the rate is high, the life of the grease may be shortened.	JIS K 2220 – 11.
Base oil viscosity	The speed (duration of time) at which a base oil passes through a thin pipe due to its own weight. The value is calculated by dividing viscosity by density. Generally, high kinetic viscosity indicates better load bearing, but produces larger viscosity resistance in high-speed operations.	JIS K 2283 – 5.

# Introduction of greases for bearings (reference)

\* Greases below cannot be attached to NSK hand grease pump.

## NSK Grease FM1 (NSK GRS FM1) Quantity: 80 g Tube color: Gold

Fluorochemical grease for a wide variety of uses, with superb torque characteristics at low temperatures and long-term lubrication properties at high temperatures. Range of allowable temperatures: -40 to +160°C.

Thickener	Polytetrafluoroethylene [PTFE]
Base oil	Perfluoropolyether
Consistency	325
Dropping point	—
Volume of evaporation	0.5% (150°C, 22 hr)
Copper plate corrosion test	Satisfactory (100°C, 24 hr)
Oil separation	1.00% (100°C, 24 hr)
Base oil kinematic viscosity	85 mm <sup>2</sup> /s (40°C)

## Greases for machine tools spindles

### NSK Grease MTS (NSK GRS MTS)

Quantity: 100 g (Available in 1 kg cans)  
Tube color: Black

Contains urea thickener and delivers higher heat resistance. Recommended for use with ultra high speed machine tool spindles. Allowable temperature range is -40 to +130°C.

Thickener	Urea
Base oil	Mixed synthetic oil
Consistency	275
Dropping point	>220°C
Volume of evaporation	0.30%
Copper plate corrosion test	Satisfactory (100°C, 24 hr)
Oil separation	0.40%
Base oil kinematic viscosity	22 mm <sup>2</sup> /s (40°C)

### NSK Grease MTE (NSK GRS MTE)

Quantity: 100 g (Available in 1 kg cans)  
Tube color: Black

Formulated to handle higher load capacities. Recommended for use in high speed machine tool spindles. Allowable temperature range is -20 to +130°C.

Thickener	Barium complex
Base oil	Ester oil
Consistency	290
Dropping point	>200°C
Volume of evaporation	0.20%
Copper plate corrosion test	Satisfactory (100°C, 24 hr)
Oil separation	1.00%
Base oil kinematic viscosity	23 mm <sup>2</sup> /s (40°C)
